CATALOGS AND INFORMATION SYSTEMS

For more than 25 years, the TOPMOTIVE Group has been developing all-encompassing catalog and information systems for the Independent Aftermarket. Our trade-specific, innovative catalog structure and the thereby gained depth in content set the benchmark on the market. To further maintain this position, our systems are constantly equipped with new functions and content.

Catalogs for Wholesalers

Our customizable catalogs for the spare parts market in the automotive, truck and motorbike segments contain article information of all data suppliers that exist in TecDoc or the TOPMOTIVE Datapool. Besides the identification of spare parts, we can establish a connection to various ERP systems via our interface ERP.Connect. Thus prices and availabilities can be shown live as well as articles ordered directly.

Moreover, additional modules and functionalities as well as your own brands can be integrated into your catalog. We offer catalog expansions in the form of individually selectable modules, as well as in various packages. This way, every spare parts distributor can decide individually which additional functions are of importance to him and his customers in repair shops, such as a graphical parts search, OE replacement chains, labor times, technical data, inspection data, tire modules or the premium universal search.

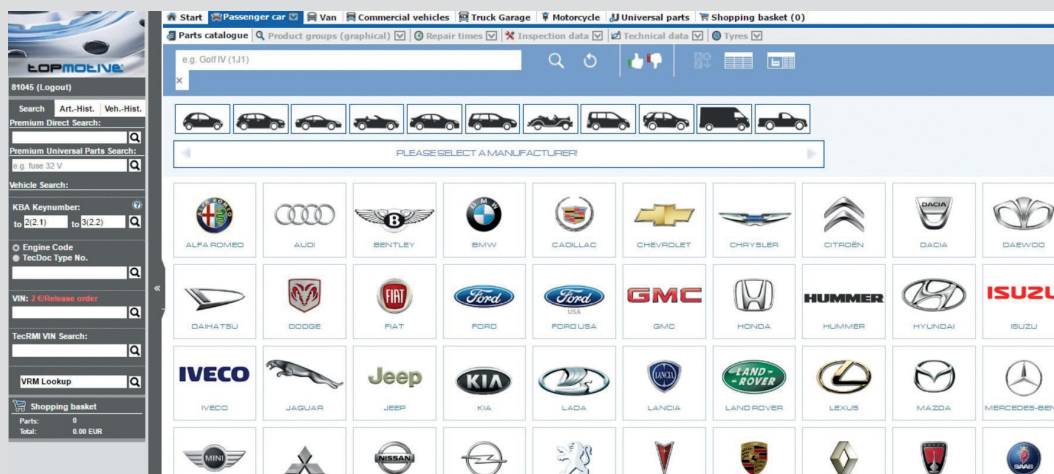

Through the application of our customer information system (CIS), your employers can additionally see relevant customer data (contact details, open orders, credit limits etc.) within the catalog which are provided by other data bases. With our administration program you may administer and/or control your linked catalog customers, modules and log-ins completely independently.

Catalog for the Parts Industry

We offer special catalogs to parts manufacturers, that are very similar to the those for wholesalers in regards to set-up, content and function. However, an industry catalog only shows the respective manufacturer's own brands and product groups. The catalog is set up internationally and can be shown in 37 different languages.

As an alternative to the customizable parts catalogs our standardized catalog version TecCat may also be used for the identification of vehicle spare parts.

All TOPMOTIVE catalog systems are available in various technologies (Installation / Smartclient, Browser Version / Online, App or Offline (CD / DVD) and can be linked to all common ERP systems.
